# SIMPLIFIED RISER MANAGEMENT

Over the years, cabling and wires in a commercial building can accumulate, creating a riser closet that is difficult to maintain and update. With a riser management program, you can implement the tools needed to properly manage your Telco and IT riser infrastructure.

To start, our team of network specialists work closely with building owners and property managers to conduct a riser audit, physically reviewing each closet used for voice/data communications. Once complete, we'll work together to leverage and modify existing processes.

BENEFITS OF RISER MANAGEMENT PROGRAM

- Code-compliant riser closet
- Future expansion capabilities
- Hardware replacement schedules

TEKNECKS is a locally owned and operated technology consultant with multidiscipline expertise in various intelligent building technologies. Our experience in managing and delivering projects related to the building operations network is second to none.

RISER MANAGEMENT PROGRAM

- Tagging all abandoned cable with a unique ID and "Future Use"
- Documentation of current state of riser closet, any wall or floor mount equipment cabinets, and fire/life safety issues
- Periodic review plan customized to facility needs
- Strategic planning of long-term initiatives (cable remediation, wall repair, etc.)

- Permit process for new cabling needs
- Management of co-location facilities, if needed
- Documentation and diagramming of communications network design (layer 2/layer 3)
- Hardware replacement schedules to facilitate budgeting and refresh planning
