TEKNECKS is a locally owned and operated technology consultant with multidiscipline expertise in various intelligent building technologies. Our experience in managing and delivering projects related to the building operations network is second to none.
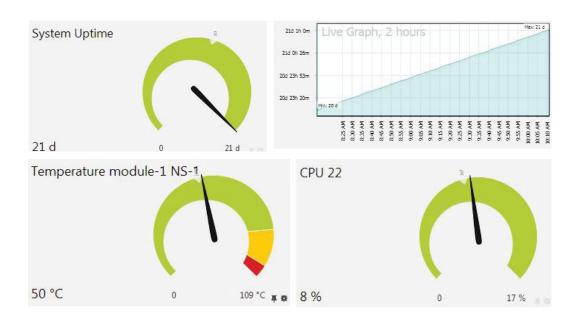

Is your system protected in the event of unpredicted network downtime? Implementing TekNecks' network monitoring services helps to prevent these uncertainties. If the device is assigned an IP address, we can protect it with real-time monitoring.

You can rest easy knowing that your network is protected with a user-friendly and secure system that'll alert you if any problems occur. In addition, the system does not require special firewall access rules, as all data is gathered from inside the network and communicated out to the master system via encrypted data transfer.

IP NETWORK MONITORING FEATURES

o 24/7 real-time monitoring of any IP network device
o Graphical display for easy communication
o Email or text notification if devices go offline and when restored
o Customized portal for real-time monitoring of devices
o Multiple network location monitoring
o Secure data gathering and transfer
